## Product Description

### Product Overview

Emergency Shut Valve is installed on the bottom of the tanker, the top parts is tightly sealed inside the tanker. External shear groove design limits product spillage when the tanker is crashed down, it will automatically cut off itself via this groove under the situation there's no affectation on the sealing. This will efficiently protect the over rolled tanker from leakage to ensure the safety when transportation. This product is suitable for water, diesel, gasoline and kerosene and other light fuel, etc.

**Treatment** The whole valve body is passed a special surface process to improve the anti-corrosion.

**Hydrodynamic Body Design** and high lift poppet minimizes pressure drop to give maximum flow rate.

When need to emergency discharging, the pneumatic control is useless, it can be opened by manual way. Easy installation

The size of the valve is more smart, is suitable for the smaller space's demand.

Allows the air cylinder piston to be replaced without removing the valve from the tank pipe work.
