Product Description

Product Overview

Emergency Shut Valve is installed on the bottom of the tanker. The top parts are tightly sealed inside the tanker. External sheargroove design limits product spillage when the tanker is crashed down, it will automatically cut off itself via this groove under the situation there's no affection on the sealing. This will efficiently protect the over-rolled tanker from leakage to ensure the safety when transportation. This product is suitable for water, diesel, gasoline and kerosene and other light fuel, etc. The whole valve body is passed a special surface process to improve the anti-corrosion. Design and high lift poppet minimizes pressure drop to give maximum flow rate. Meets the standard requirements to limit product spillage in the event of an accident. If need, can be installed an external cylinder to do the pneumatic control.
